

# Reduce plumbing blockages and odors

## Lock Down Strainer

In all drainage environments, any open floor drain or vent stack presents an opportunity for foreign objects to find their way into a line and cause an expensive and unbudgeted blockage. While in many cases baskets are placed within floor drains to collect food debris or mop strings, the staff, frustratingly remove them so they don't have to clean out the collected spoils.

**50% of blockages in a commercial kitchen are caused by non food related items.**

By fitting a drain strainer, the majority of these problems associated with blockages can be stopped but screwing in a permanent fixing is timely, causes damage and doesn't allow for quick remedial access for plumbing and facility maintenance.

**Protects drains from unwanted blockages caused by: silverware, broken dishes and glass, ramekins, corks, bottle caps or rags.**

### Application examples:

Commercial kitchens, Food service areas,  
Grocery stores, Hospitals, Dentists, Education.

# Lock Down Strainer

## How does it work?

The Lock Down Strainer fits standard sized 2", 3" and 4" drains/vent stacks. The top of each strainer has three aluminum key screws which when tightened cause an expandable gasket to lock the strainer securely into place. Reversing the action allows quick removal within seconds.

### Features:

- Unit is non removable and tamper proof
- Creates a flush fitting making tampering difficult
- Available in three standard sizes to fit all 2", 3" or 4" fittings.
- Tamper resistant screws prevent unwanted removal of drain cover
- Dishwasher Safe for hygiene requirements
- Quick and easy product installation.

### Advantages:

- Prevents large excess food debris entering drain line
- Stops rags, clothes and mop strings entering drain line
- Stops vermin or birds climbing or nesting into vent stacks
- Helps and protects lift stations or pump equipment from failure
- Reduces plumber call outs.
